1. Disconnect the drive

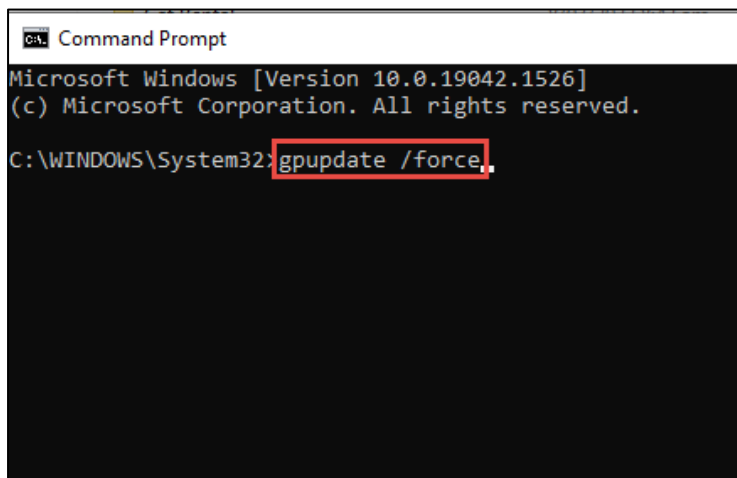

2. Open command prompt

3. Type in **gpupdate /force**

4. Press enter

```

C:\> Command Prompt - gpupdate /force

Microsoft Windows [Version 10.0.19042.1526]
(c) Microsoft Corporation. All rights reserved.

C:\WINDOWS\System32>gpupdate /force
Updating policy...

```

5. It may look like it is taking a while to "update policy" but eventually it will say the below

```

Administrator: Command Prompt - gpupdate /force

Microsoft Windows [Version 10.0.19042.1526]
(c) Microsoft Corporation. All rights reserved.

C:\WINDOWS\system32>gpupdate /force
Updating policy...

Computer Policy update has completed successfully.
User Policy update has completed successfully.

The following warnings were encountered during user policy processing:

The Group Policy Client Side Extension Folder Redirection was unable to apply one or more settings because the changes must be processed before system start-up or user logon. The system will wait for Group Policy processing to finish completely before the next start-up or logon for this user, and this may result in slow start-up and boot performance.

For more detailed information, review the event log or run GPRESULT /H GPReport.html from the command line to access information about Group Policy results.

Certain user policies are enabled that can only run during logon.

OK to log off? (Y/N)

```

6. Type the letter N

7. Press enter

```
Administrator: Command Prompt
