New steps for loading XPO's into Naxt Production

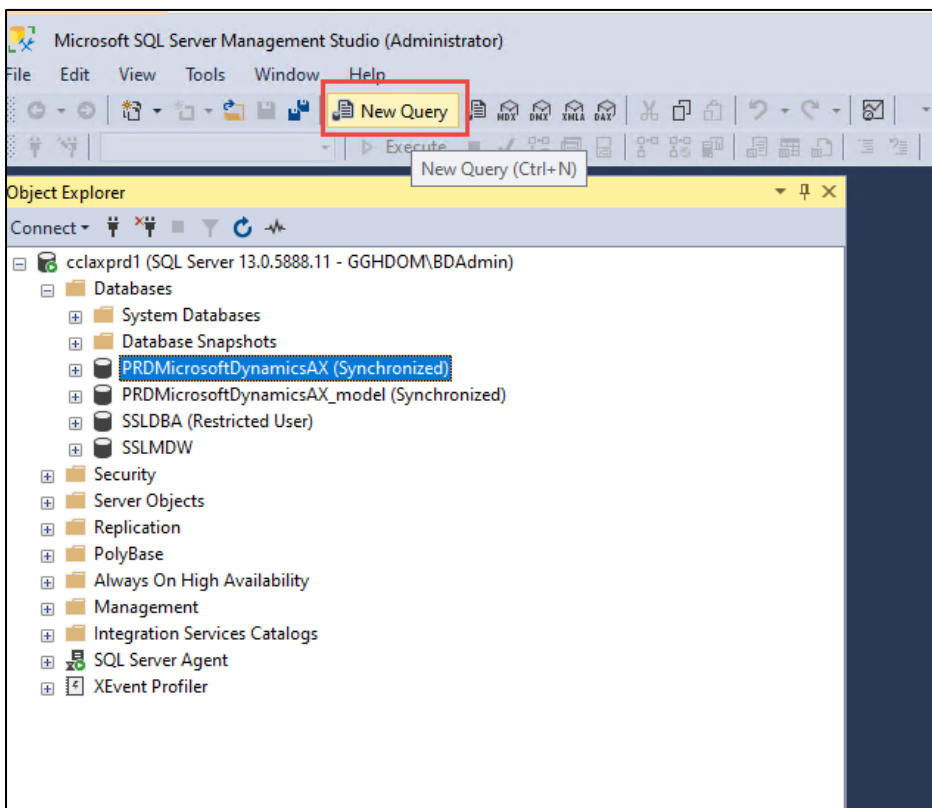

Terra Industrial New Zealand Ltd

PO Box 16 168
16 Branston Street, Hornby
Christchurch 8441, New Zealand
03 983 2333 Tel
www.TerraCat.co.nz

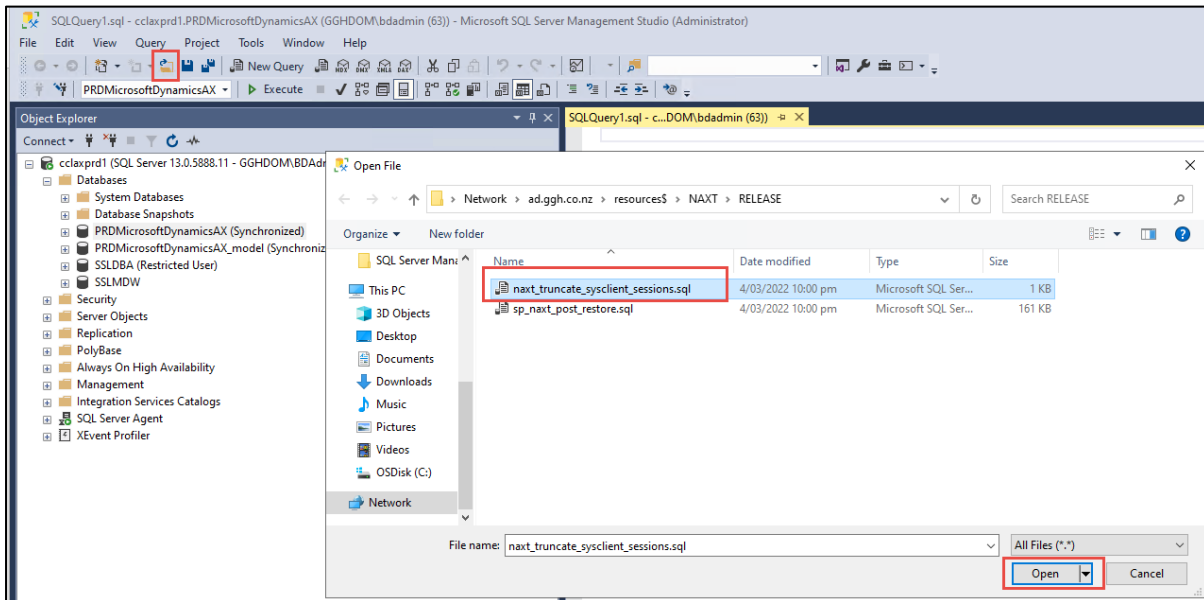

On Cclmgt01 open SQL Server Management Studio and connect to Production SQL Server

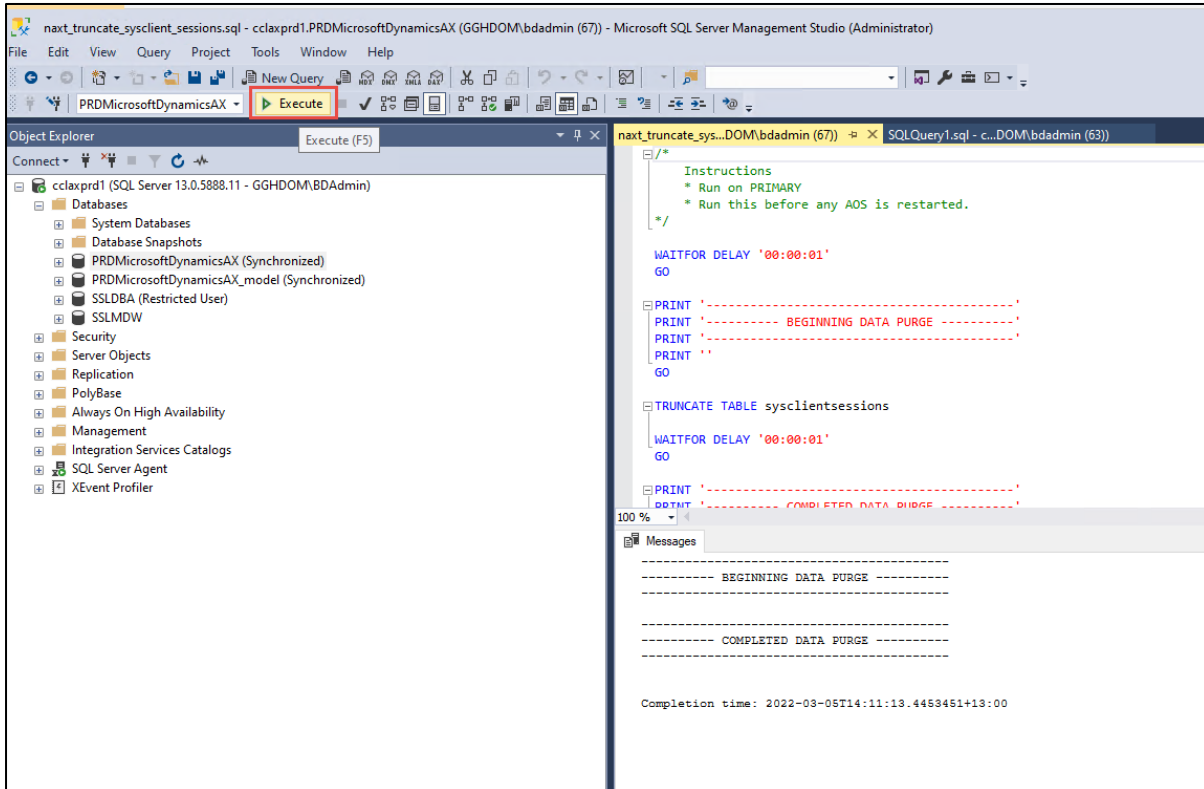

Find PRD Sync new query

Open file [\\ad.ggh.co.nz\resources\\$\NAXT\Release](\\ad.ggh.co.nz\resources$\NAXT\Release)
NAXT_truncate sessions

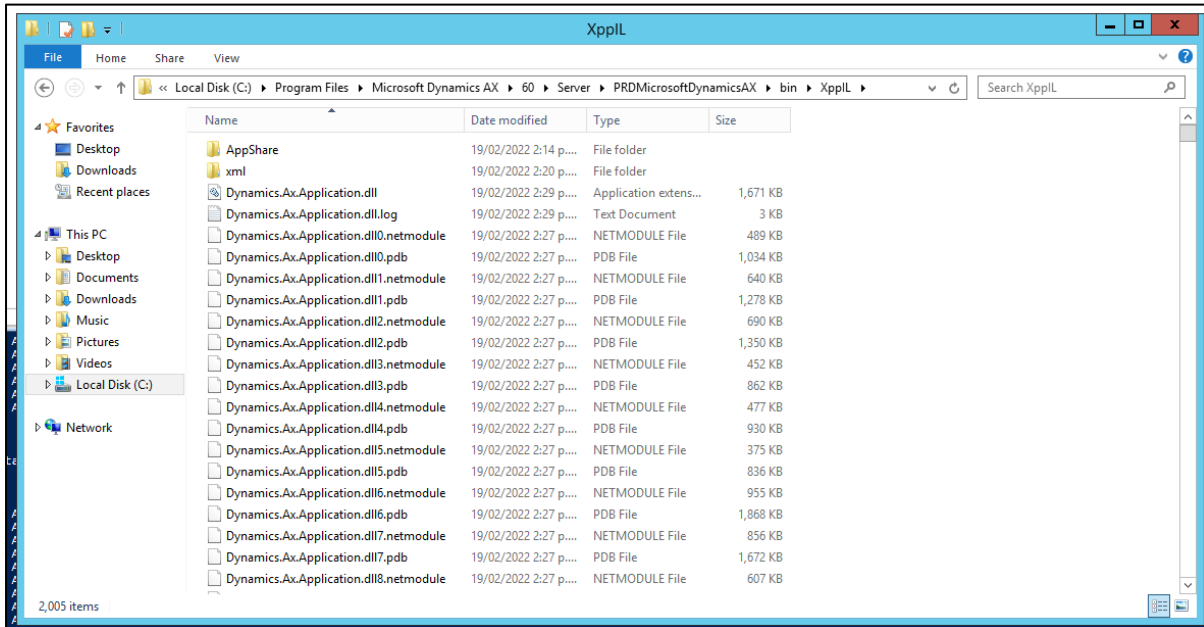

Execute (note do not run this if any aos services are running)

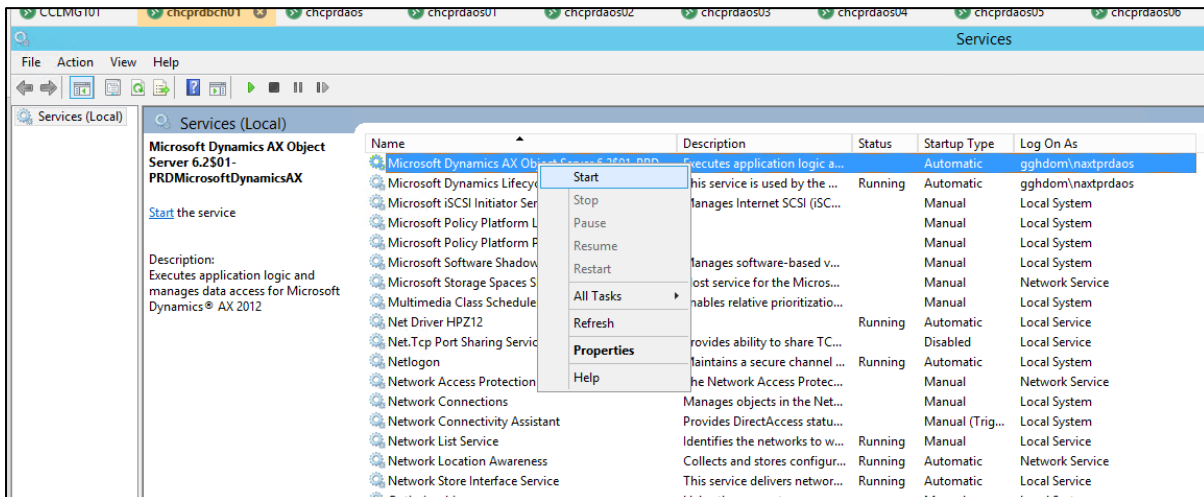

Clear XPPIL folder on chcpdbch01

Delete everything within the XppIL folder (including the appshare and XMI folder)

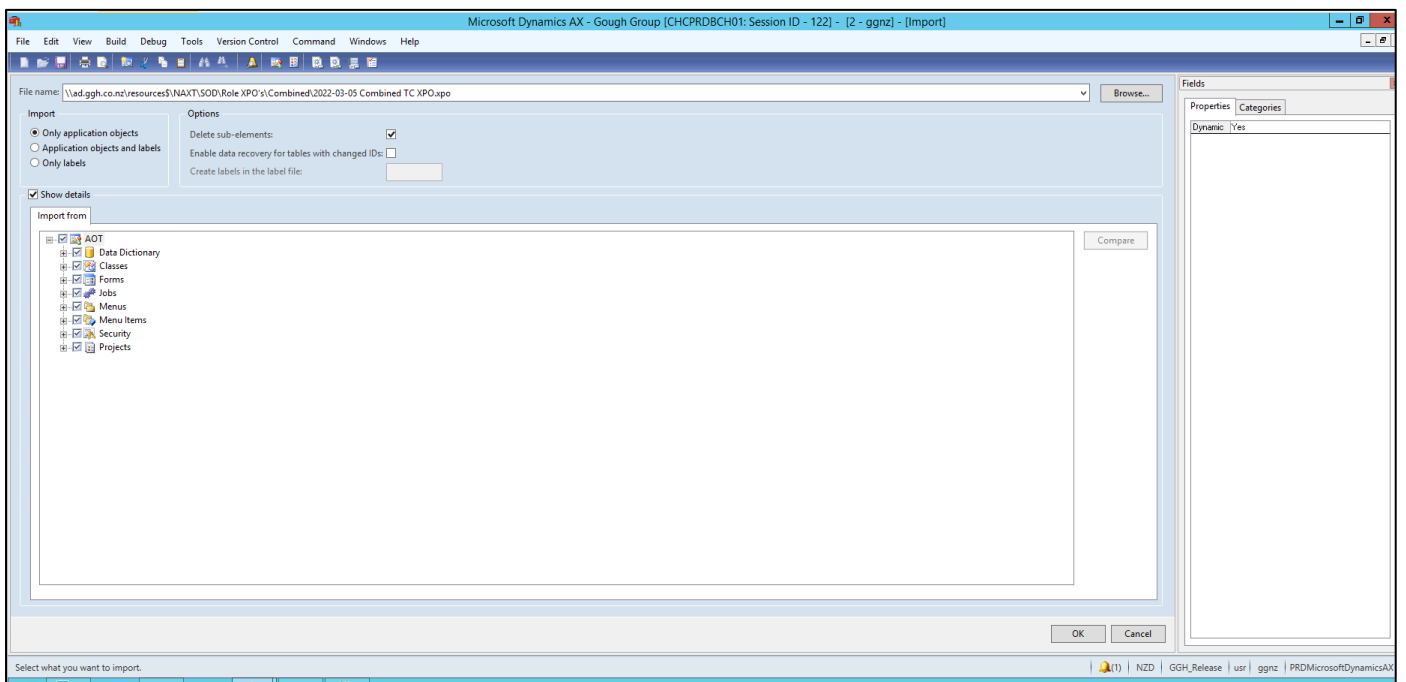

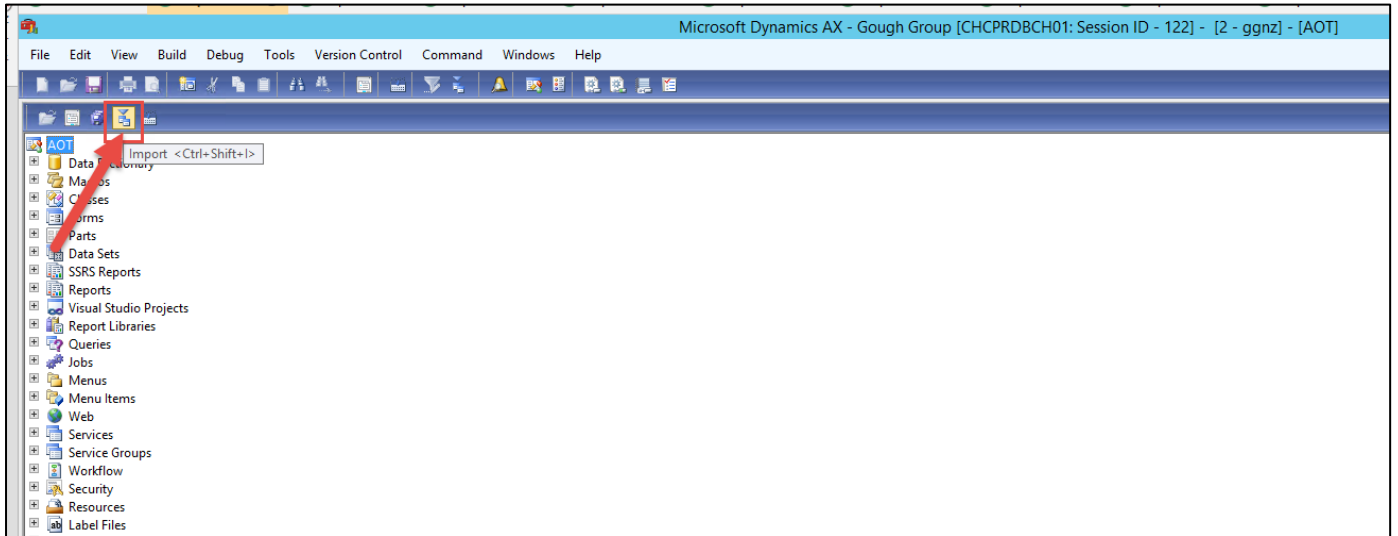

Start CHCPRDBCH01 Microsoft Dynamics Service

Make sure the XppIL folder has rebuilt itself with around 2003 – 2004 items (xml folder will not always come back straight away) If the files have not come back once the service is fully running then right click the service and click Restart and check the XppIL folder again.

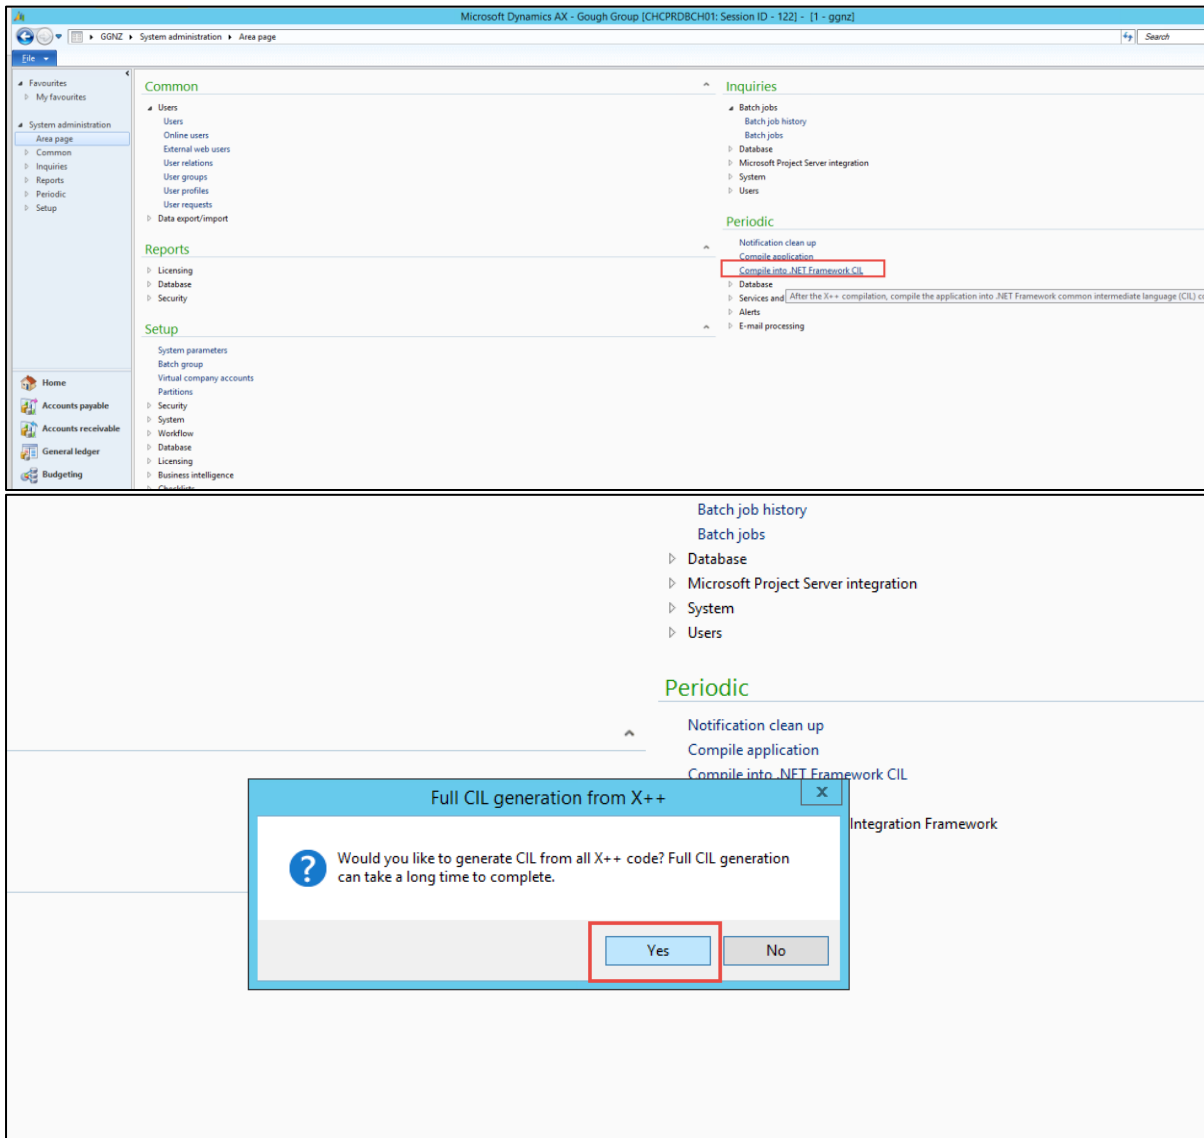

Open Dynamics AX on CHCPRDBCH01
Import XPO using AOT (CTRL+D)

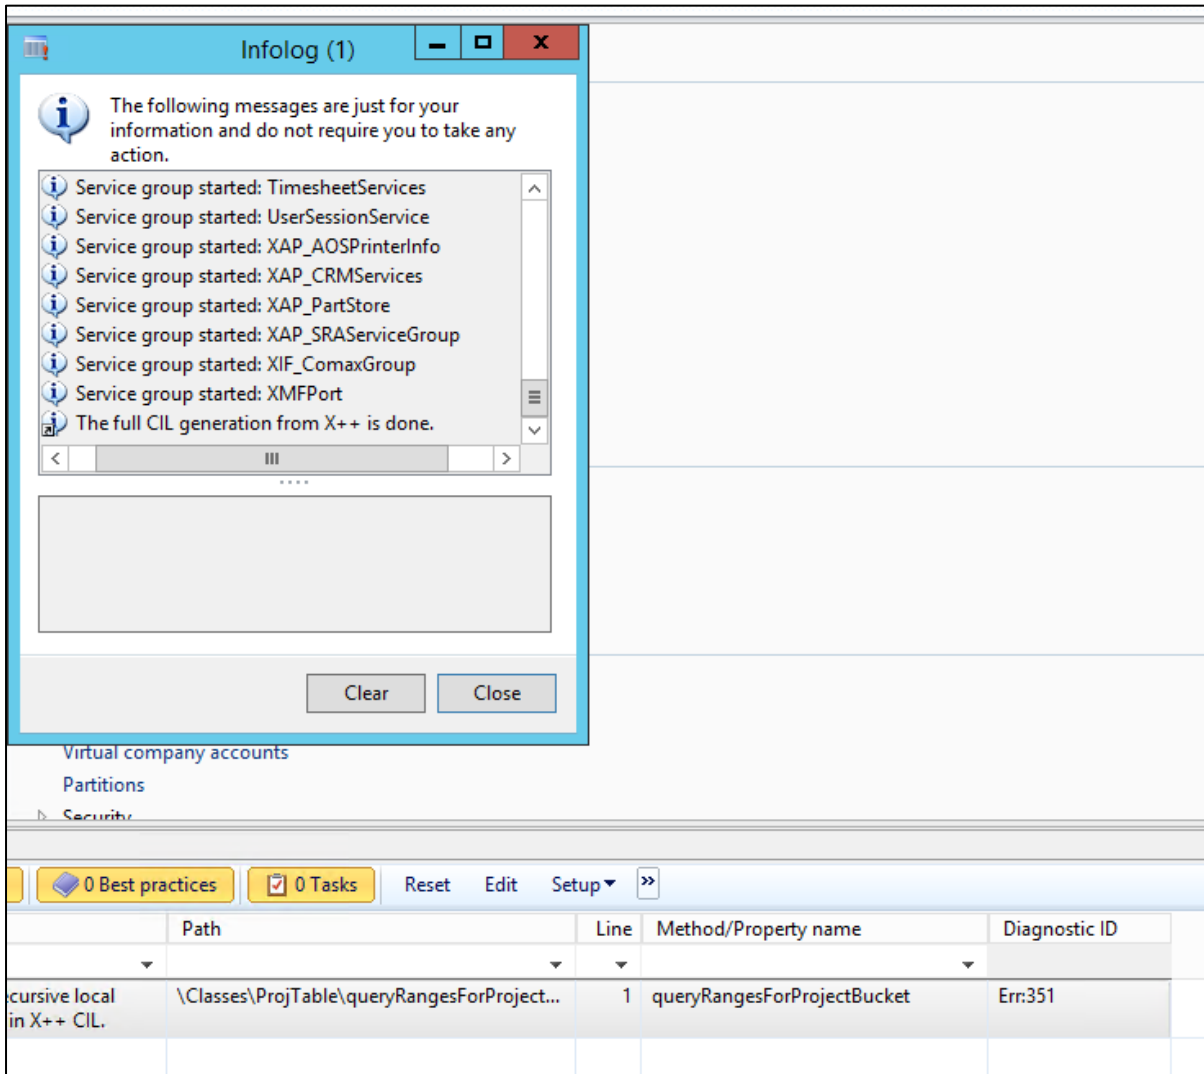

Click Yes to ALL if it asks you to overwrite an existing something.

Once Imported go to GGNZ/System administration/Area page
And click Compile into .NET Framework CIL

The screenshot shows the Microsoft Dynamics AX interface for the GGNZ system. The left-hand navigation pane is expanded to 'System administration' > 'Area page'. The main content area displays a tree view of system components. Under the 'Periodic' section, the 'Compile into .NET Framework CIL' option is highlighted with a red box. A confirmation dialog box is overlaid on the screen, titled 'Full CIL generation from X++'. The dialog contains the text: 'Would you like to generate CIL from all X++ code? Full CIL generation can take a long time to complete.' Below the text are two buttons: 'Yes' (highlighted with a red box) and 'No'.

This can take up to 30 mins to complete and you will get an info log prompt saying CIL generation complete. (note while waiting for this you can go to the XppIL step and clear the XppIL folders of the other AOS servers ready for when we are about to turn the servers back on.

The screenshot shows a software interface with a modal window titled "Infolog (1)". The modal contains a list of service group start messages and a "Close" button. Below the modal, there is a table with diagnostic information.

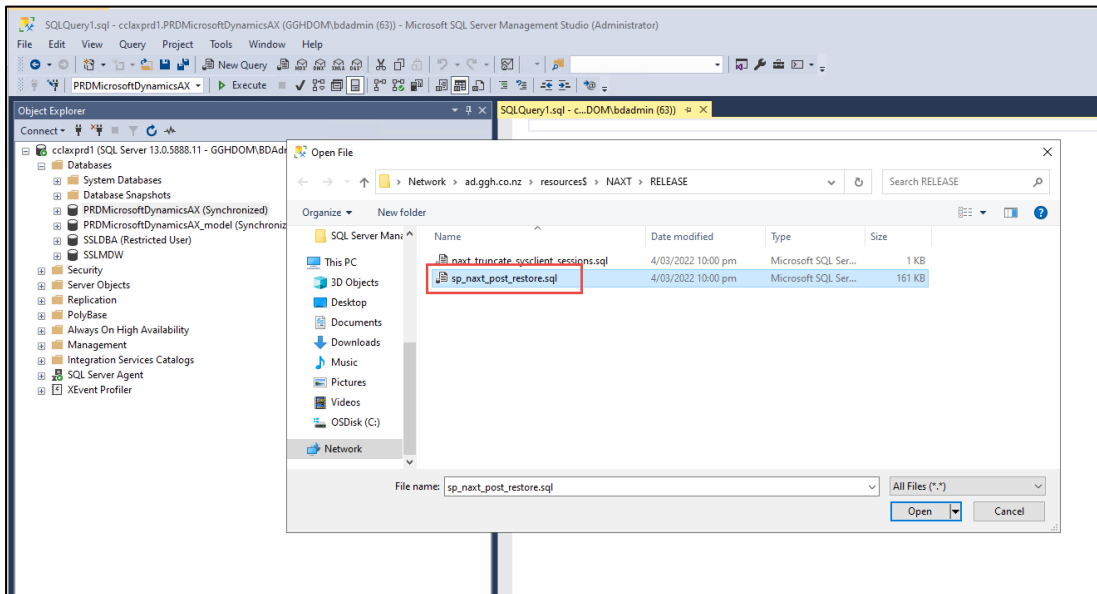

Infolog (1) Messages:

- Service group started: TimesheetServices
- Service group started: UserSessionService
- Service group started: XAP_AOSPrinterInfo
- Service group started: XAP_CRMServices
- Service group started: XAP_PartStore
- Service group started: XAP_SRASServiceGroup
- Service group started: XIF_ComaxGroup
- Service group started: XMFPort
- The full CIL generation from X++ is done.

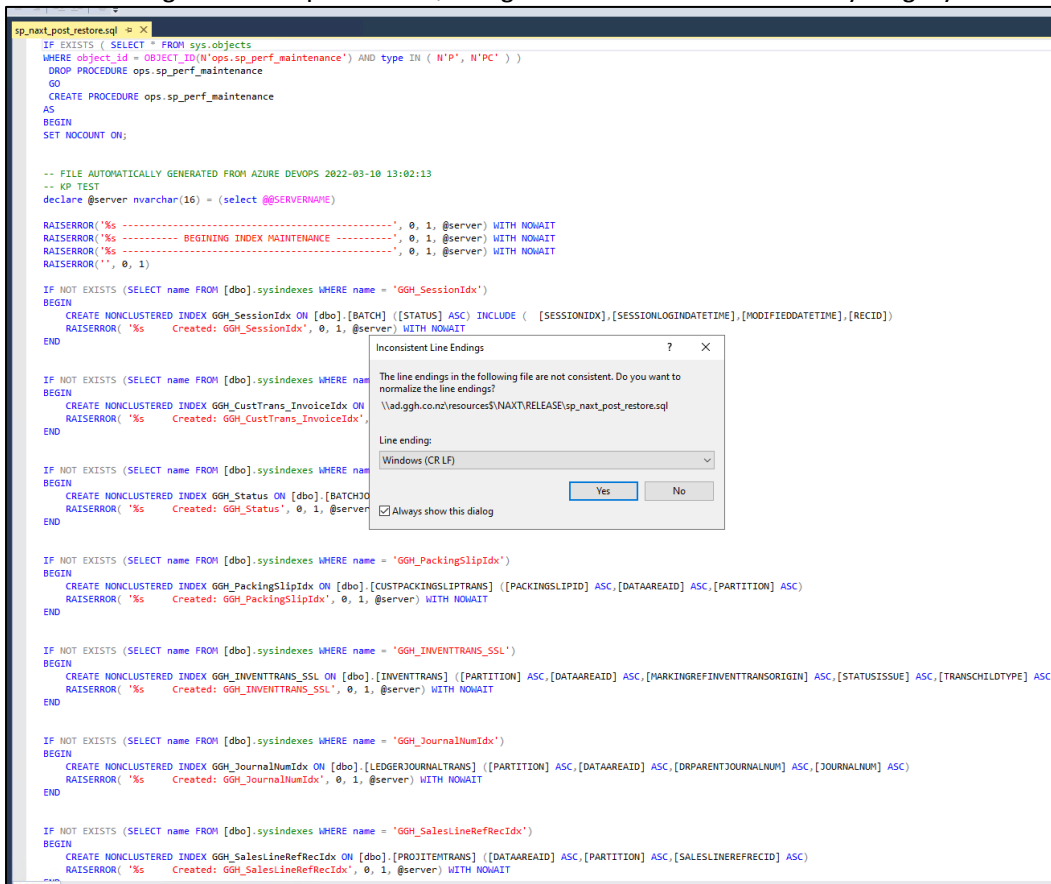

Diagnostic Table:

	Path	Line	Method/Property name	Diagnostic ID
recursive local in X++ CIL.	\Classes\ProjTable\queryRangesForProject...	1	queryRangesForProjectBucket	Err:351

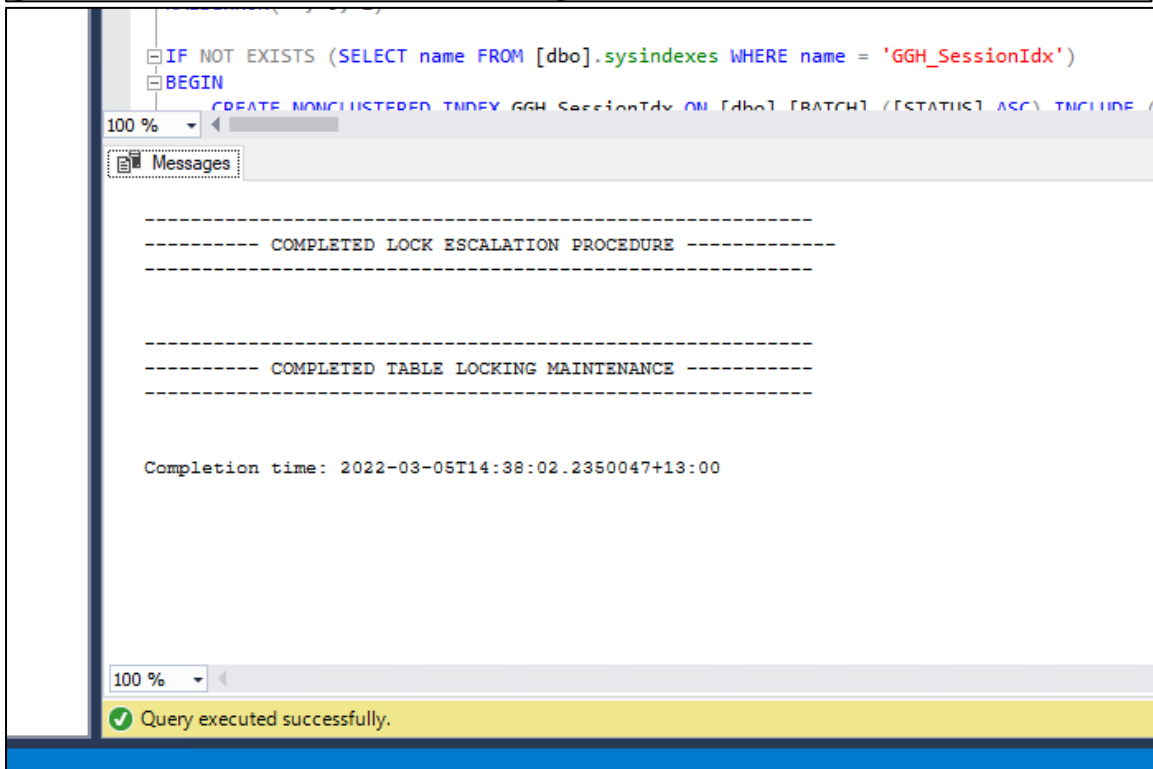

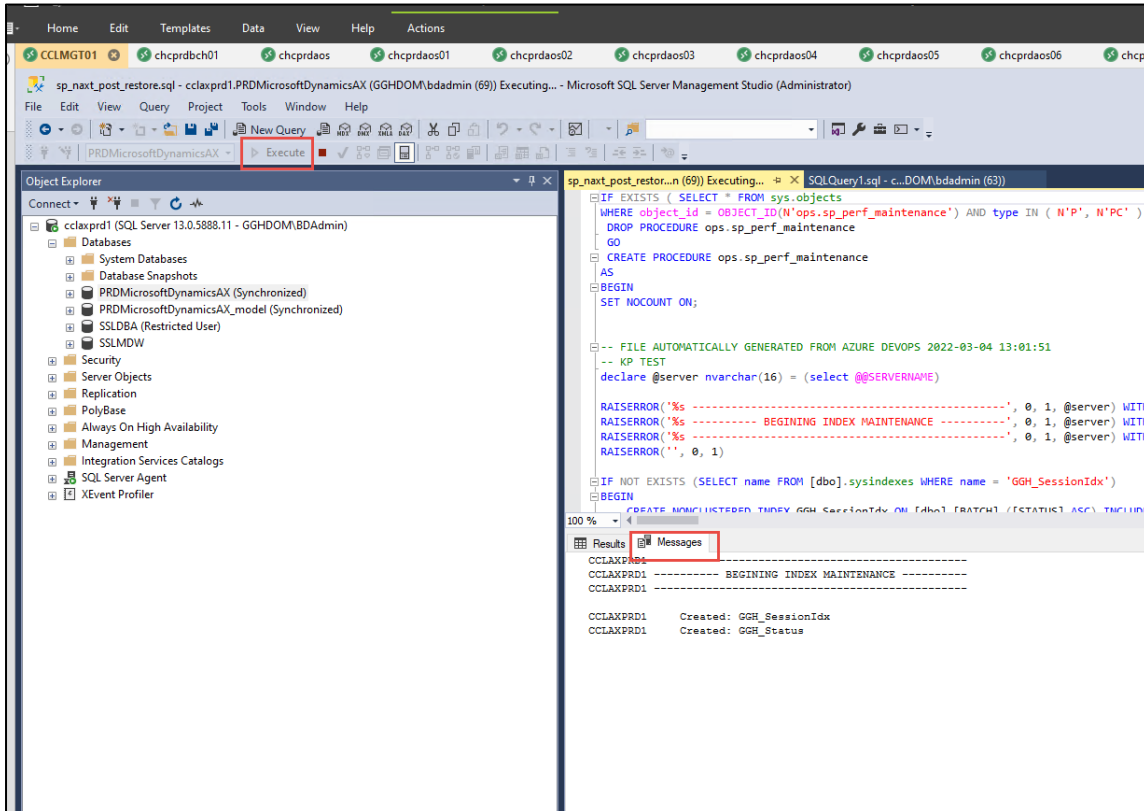

Now go to CCLMGT01 and SQL management studio connect to NAXT Production SQL Server
New Query against PRDMicrosoftDynamicsAX and open the sp_nxt_post_restore.sql

If this message comes up click no (though I don't think it matters if you go yes either)

Click Execute and wait for it to finish, you can check messages to see that it is doing something.

Clearing XppIL folders of remaining servers

The XppIL folders will need to be cleared on every AOS server except for CHCPRDBCH01 as we have already done that one.

chcprdaos, chcprdaos01, chcprdaos02, chcprdaos03, chcprdaos04, chcprdaos05, chcprdaos06, chcprdaos07, chcprdaos08, chcprdaos09,

C:\Program Files\Microsoft Dynamics AX\60\Server\PRDMicrosoftDynamicsAX\bin\XppIL

Delete everything within the XPPIL folder on all AOSs

SHIFT Delete rather than sending to Recycling Bin

Start up AOSs Microsoft Services again to bring NAXT back online for everyone, I have found using the script to start them all at once does not always download the 2003 items that should be expected in the XppIL folder, you may want to do one at a time or separate the starts by 30 seconds each

CHECK THE XPPIL FOLDERS HAVE RECREATED ALL FILES ON ALL OF THE AOSs otherwise this will cause errors for users when working in NAXT.

Test Parts store (which uses AOS09) by going to the Parts.cat.com website and make sure it pulls through pricing and availability of items
