**AUC files are NAXT cache files that accumulate over time.
Clearing these files auto closes Naxt.**

Here is how to do the AUC clean:

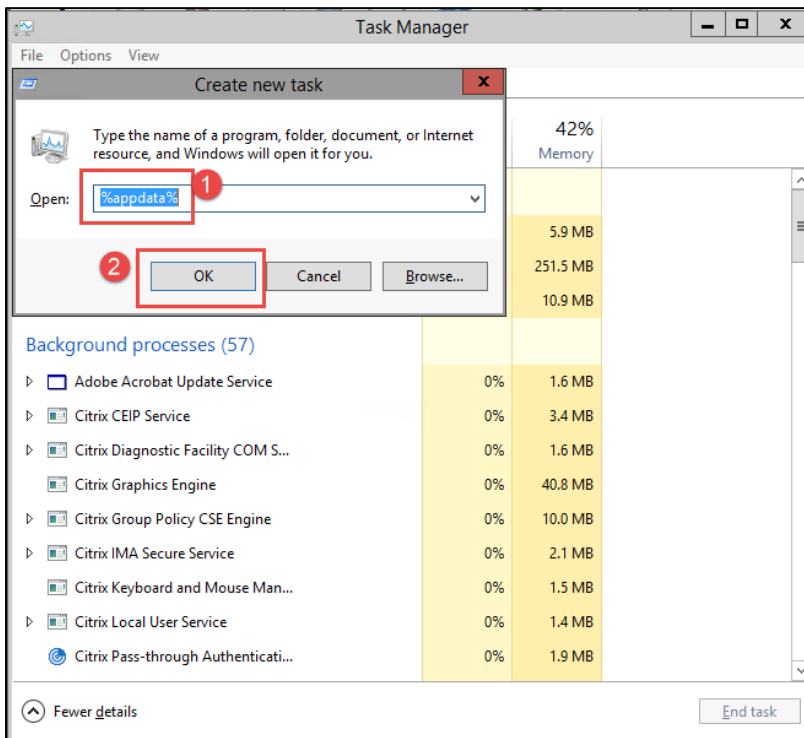

1. Have NAXT open
2. Press **CTRL** and **F3** together on the keyboard – Task manager window will open

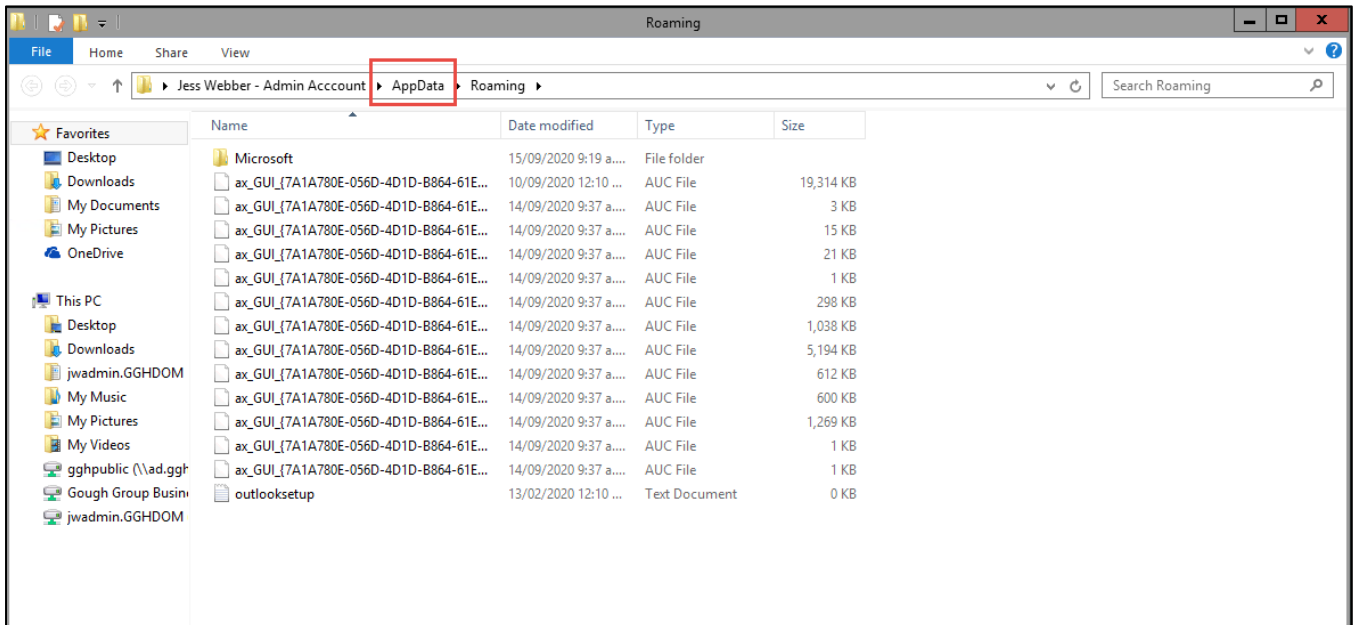

3. Click **File – New task**

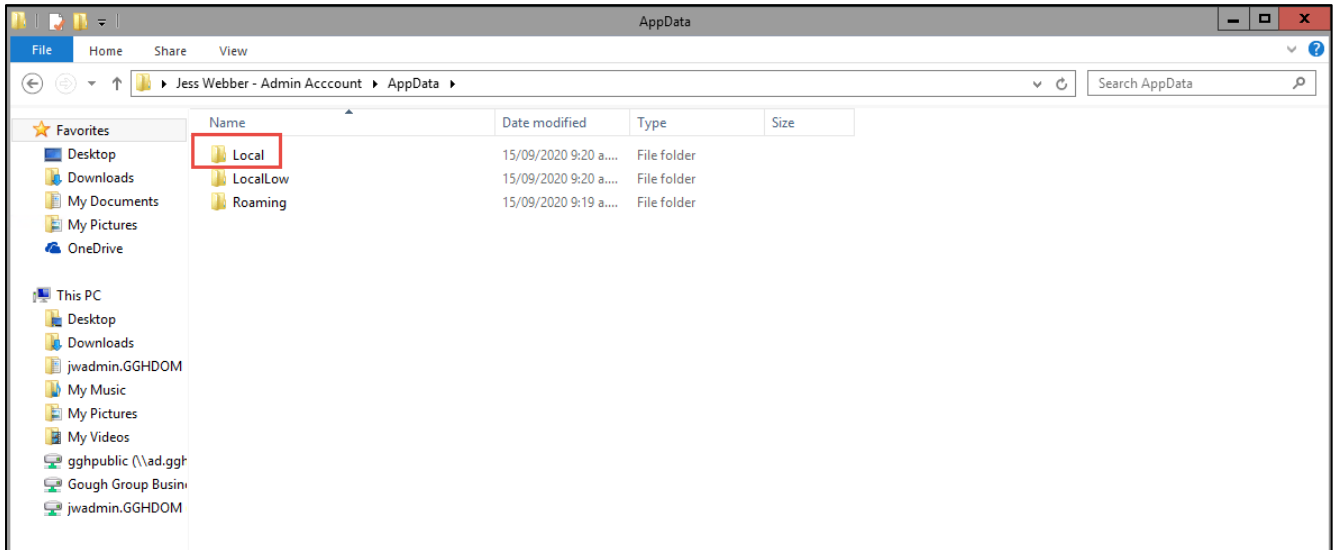

4. A new task window will open – type in **%appdata%**
5. Click **OK**

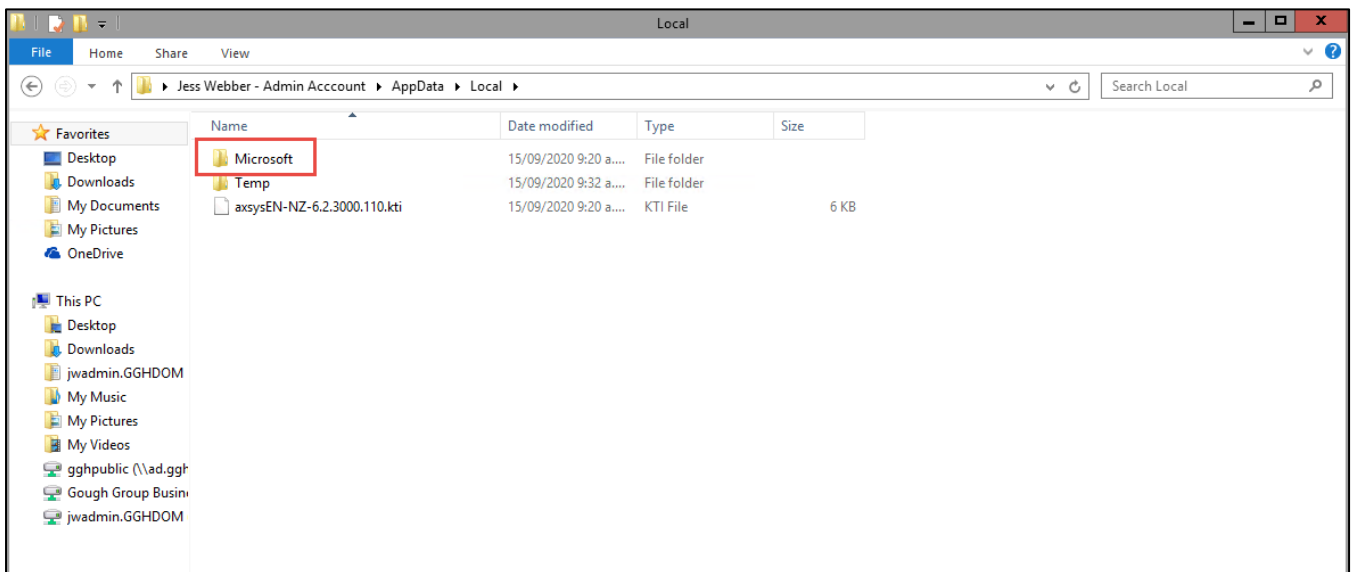

6. The below window will open – click on **AppData**

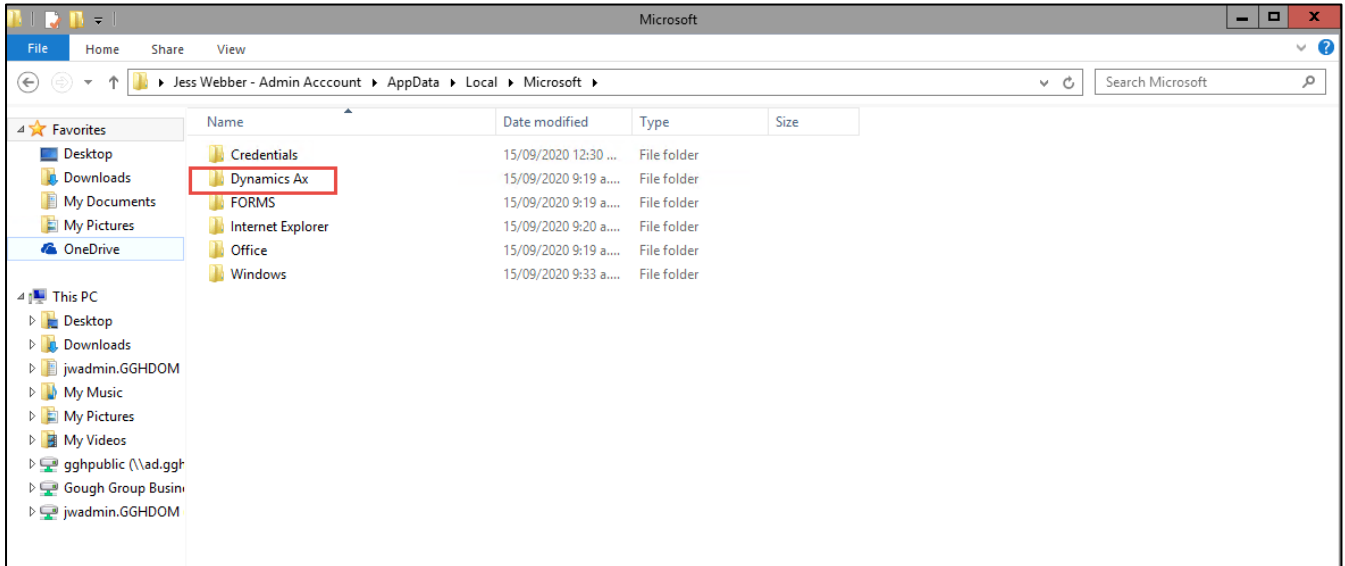

7. Double click on the folder named **Local**

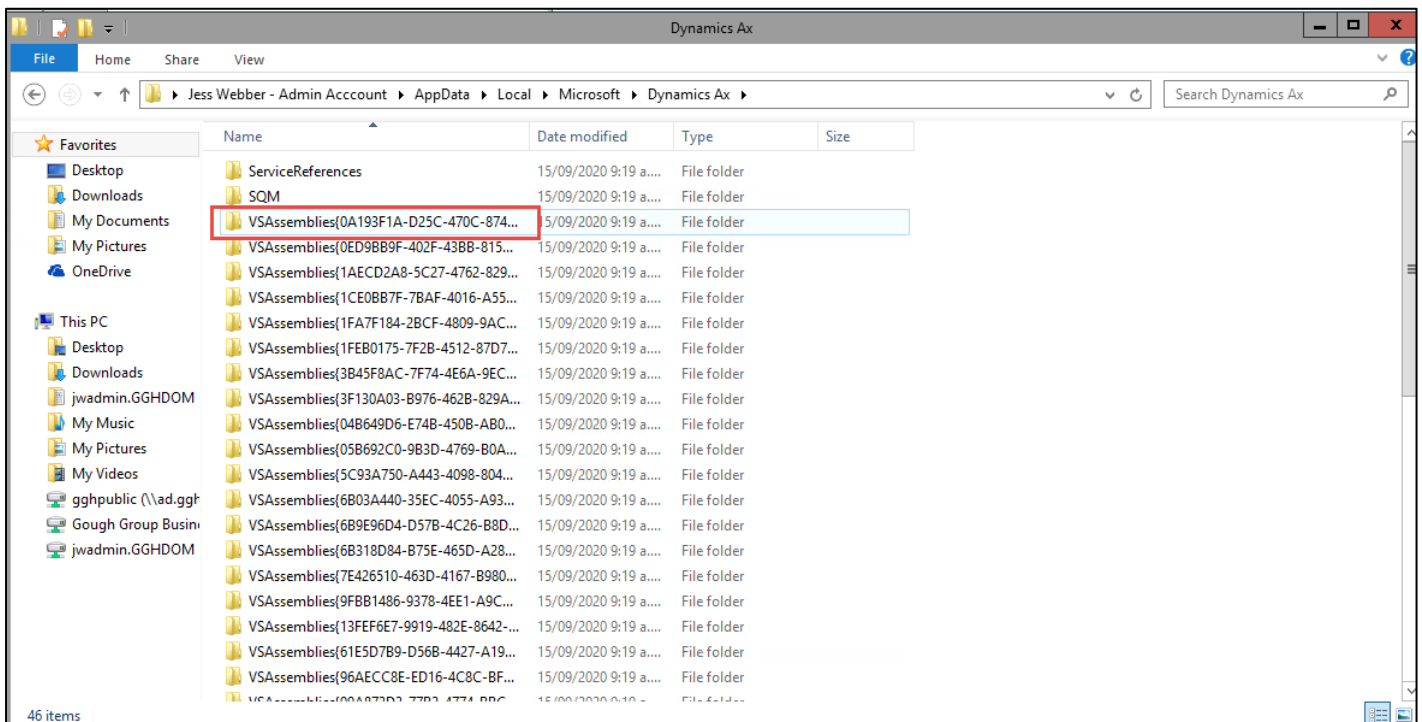

8. Double click on the folder named **Microsoft**

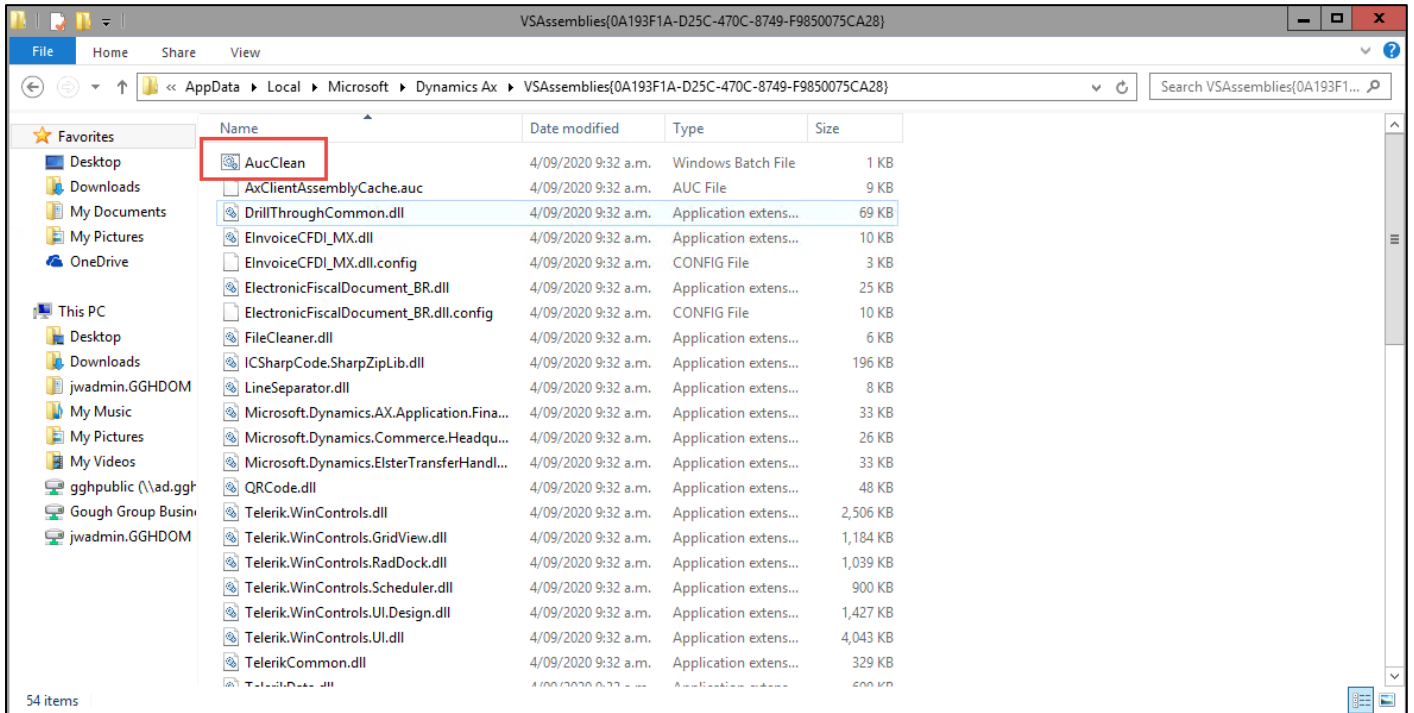

9. Double click on the folder named **Dynamics AX**

10. If you have multiple of the below folders, that's ok, just double click on the first one

11. Double click on **AucClean** – this will clear out all the AUC cache files and close your NAXT down

Now you should be good to reopen your NAXT and continue your work 😊
